

Features and Benefits

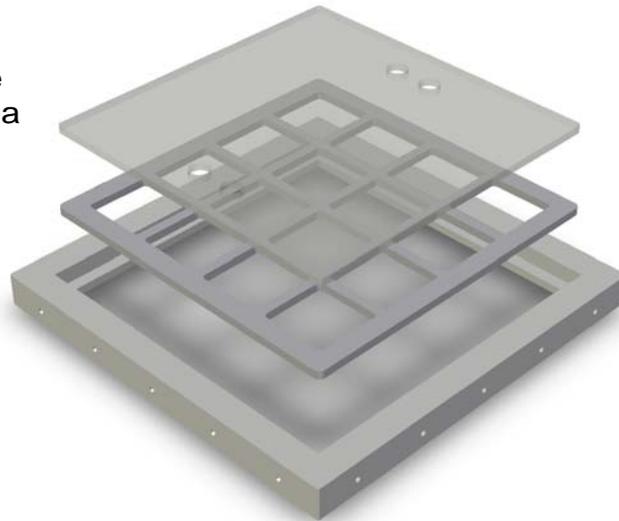

The Aztech Controls 24" x 24" view tile for semiconductor grade cleanroom raised floor systems is a strong, clean and low cost option to re-processing regular floor tiles into view tiles.

The main structure is 6061-T6 Aluminum. The frame then is Type III "hard" anodized which results in a tough outer skin with excellent abrasion resistance, corrosion resistance, color fade resistance, dielectric strength and surface hardness.

The tile includes a powder coated steel grate for safety and a plastic window.

This multiple feature view tile can also be used to hold gas and chemical VMB's, electrical components and various other tool support equipment.

Many other custom applications are possible.
